

PAYMENT GATEWAY PLATFORM FOR MULTI- NATIONAL COMPANIES

Global Payout is introducing the **eWallet payment platform** that provides multi-national companies a cost effective and efficient method of paying its employees and affiliates in foreign countries. If your company has employees and affiliate members located in countries around the world, you will want to consider the integration of this international payment service.

The key features for **employees or affiliate/members** are:

- Receiving money** – payroll and commissions can be deposited into an employee or affiliate/member’s **eWallet** account.
- Transferring money** – funds can be moved from the **eWallet** to bank accounts in the U.S. and international banks, debit and credit cards, and to other **eWallet** accountholders.
- Online purchasing** – affiliates/members have the ability to directly purchase products from the company website using their **eWallet** account eliminating credit card processing costs to the company.
- Cell phone and Internet access** – enables all **eWallet** accountholders with a cell phone to receive and transfer funds and access balance and transaction history via their cell phone or secure internet portal.

The key features for the **multi-national company** are:

- Save money on payroll payment processing** – eliminate checks and wires.
- Segregate currencies** – the company can segregate payout funds into separate currencies and keep them segregated so there is no currency exchange transaction for eWallet account-holders.
- Company controls the payment and receipt of funds internationally** – company management is provided internet access to **their own management console** that allows for payment and receipt of funds anywhere in the world.
- Efficient payments to employees, distributors or customers** – issuing payouts is made simple and easy, saving the company time and money.
- Auto debit** – for monthly subscription or product purchases directly from member eWallet accounts.
- Revenue** – commission revenue can be generated to the company from its members’ eWallet transactions.
